Key points

- The input signal parameters of foot impact revealed good to excellent reliability within different trials/days.
- The gastrocnemius medialis indicated more parameters of soft tissue vibration in good reliability than the vastus lateralis, and the parameters of soft tissue vibration were reduced significantly within different days.
- A minimal number of steps within different trials/days should be checked, permitting to reach a good reliability level of soft tissue vibration.

AUTHOR BIOGRAPHY

Qingshan ZHANG

Employment

School of Athletic Performance, Shanghai University of Sport, Shanghai, China.

Degree

Ph.D., MD

Research interests

Sports biomechanics, athlete training, injury prevention

E-mail: zhang.qingshan@hotmail.com

Christophe HAUTIER

Employment

Université de Lyon, UCBL1, Laboratoire Interuniversitaire de Biologie de la Motricité - EA 7424, UFR STAPS, 27-29 boulevard du 11 novembre 1918, 69622, Villeurbanne Cedex, France.

Degree

Ph.D., MD

Research interests

Sports biomechanics, soft tissue vibration, fatigue, metabolic energy

E-mail:

christophe.hautier@univ-lyon1.fr

Chloé BONIS

Employment

Université de Lyon, UCBL1, Laboratoire Interuniversitaire de Biologie de la Motricité - EA 7424, UFR STAPS, 27-29 boulevard du 11 novembre 1918, 69622, Villeurbanne Cedex, France.

Degree

MD

Research interests

Sports biomechanics and Bioengineering

E-mail: chloe.bonis@gmail.com

Robin TRAMA

Employment

Faculty of Kinesiology - Human Performance Lab, Calgary, Canada. Human Performance Lab, Faculty of Kinesiology, University of Calgary, Calgary, Alberta, Canada.

Degree

Ph.D., MD

Research interests

Sports biomechanics, athlete performance, sport equipment

E-mail: trama.robin@gmail.com
